

- **First scenario.** Imagine that the college hire you to create an enrollment system for just international students. These students will only apply online, there won't be a front desk for this process. The process will have three steps: candidates, approved and enrolled students. Candidates are those who have already entered all contact information but have not upload require documents. The approved are candidates who have already upload require documents (Visa, English as an Additional Language, International secondary -high school- studies). Enrolled students will be approved candidates that have already made the initial tuition payment. They will received an acceptance letter to show to the regular front desk their first day on-campus.

## Pseudo Code

1. Prompt user for name to look up account
2. Does user account exist?
  1. No
  2. Prompt User to input contact information
3. If user account exists Check the user's student status
  1. If student status Candidate
  2. if student status Approved
    1. Prompt User with desired Program
      1. If desired program has space prompt User with tuition payment
        1. If user pays tuition, update status
        2. If not cancel application or give choice to choose another program
  3. If student status Enrolled
    1. Send user a copy of enrollment letter
